AP&T Warehouse Management System (WMS)

A Warehouse management system (WMS) is a key part of the supply chain and primarily aims to control the movement and storage of materials within a warehouse and process the associated transactions, including shipping, receiving, putaway and picking. A WMS monitors the progress of products through the warehouse. Our “AP&T Warehouse Management System” offers all functions to map the complete logistics processes within the warehouse. Our system gives your company real-time control over your inventory levels in ways you’ve never experienced before. It helps you put the

“AP&T Warehouse Management System” enables you to have complete visibility of your warehouse’s and provides the vital control and accuracy lacking in any manual operation.

The objective of our warehouse management system is to provide a set of computerized procedures for management of warehouse inventory, space, equipment and people with the goal of minimizing cost and fulfillment times.

“Increased Visibility”

The new Warehousing Management module helps organizations provide flexibility, and choice to customers. The automation of warehouse processes helps reduce operational costs which can be translated in lower prices for customers.

“AP&T warehouse management system” provides a suite of features and services that address a comprehensive set of warehouse operations
